

Model A

Earth's freshwater is abundant and will remain so even in the face of global climate change.

Model B

Earth has a shortage of freshwater that can be met by engineering solutions.

Model C

Earth has a shortage of freshwater, which will worsen as our world's population increases.

Model A

Earth's freshwater is abundant and will remain so even in the face of global climate change.

Model B

Earth has a shortage of freshwater that can be met by engineering solutions.

Model C

Earth has a shortage of freshwater, which will worsen as our world's population increases.
